

Weyco Group Shoebox Label Specification

These are the specifications for our new shoebox (carton) label, which went into production in April 2008. Use this label for Florsheim Mens and Womens, Nunn Bush and Stacy Adams footwear, affixing one label to each shoebox. For umi footwear, follow the umi Shoebox Label Specification, for Florsheim Kids footwear, follow the Florsheim Kids Shoebox Label Specification.

Notes:

- 1) The label stock must be 4 by 1 inches (102 by 25 mm) and be bright white.
- 2) The **S/D/M Codes** refer to the sample, damage, and mix codes we assign to every SKU.
- 3) The **Coded Date** is made up of three characters; the first represents the month and the last two represent the year: The first character is the English letter whose position in the alphabet corresponds to the month's position in the calendar year, i.e. 'A' for January, 'B' for February, and so on, up to 'L' for December. The second character represents the ten's digit of the year, i.e. '1' for the 2010's. The third character is the letter corresponding to the one's digit of the year. Use 'J' for 2010, 'A' for 2011, 'B' for 2012, etc. For example, January 2010 would be "A1J", December 2011 would be "L1A".
- 4) The **Line Drawing** is a 19 by 19 mm line sketch of the footwear inside and has its own specifications document.
- 5) The **Style**, **Color**, **Style Description** and **Color Description** fields share a common font and font size. The font should be proportional but allow enough room to print an eight-digit **Style**, a ten-character **Style Description** or a ten-character **Color Description** without obscuring the **UPC** or other label information.

Arial font is preferred, but any proportional, sans-serif font that depicts the Roman Alphabet (capital letters) and Arabic Numerals with consistent heights and without descenders will do. If Arial font is unavailable, then try Latha, Microsoft Sans Serif, Guatami, Mangal, Tahoma, Raavi, Shruti, or Tunga.
- 6) The **Width** should be printed in a larger but not narrow font as shown. It should allow for two characters like "3E" or "XW" without obscuring the **Prepack Code** which is printed when this pair is part of a prepack case.
